

A signed offer is a standing commitment: a match within its terms needs no further consent.

Two proposals for one offer: today first valid wins; P2 packs offer-disjoint winners per beat.

today: one process with its own signed feed. The one point of trust.

P2: a contract on Gnosis. The winning solver submits the transaction; the contract verifies inclusion and absence under the pinned root, then records the fills.

Clearing records the obligations; the goods still have to move. That is *settlement*, off-chain, and it is what P3's bonds, oracles and factbond certificates secure.
